ECE-R90 Regulations

The ECE-R90 is related to design of the replacement braking part which relied on the efficiency and performance.

- A replacement part shall display performance characteristics **similar to that of the original part it is intended to replace.**
- Brake linings shall **not contain** asbestos.
- A replacement brake disc/drum shall exhibit **sufficient deformation resistance under temperature.**
- The minimum thickness of the brake disc shall not be less than the minimum thickness of the original brake disc as specified by the vehicle manufacturer.

Implementation for brake pads and shoes for R90 start from March 31, 2001

Implementation for brake discs and drums for R90 start from November 1, 2016
