Electric water pump

Application for

Vehicles equipped with electric water pump

Electric water pump

- **Electric water pump** requires to be activated for fluid circulation, and this is the role of the electric water pump
- It doesn't need an accessory belt to work. This allow cooling on-demand.
- The cooling circuit gains in complexity they are associated with check valves or electrical valves.
- Some components requires a **high reliability** level as the **cooled subsystems** rely on a proper reaction time and coolant output.

S	Item name
1	Electrical auxiliary pump
2	Low temperature loop hose(pump inlet)
